The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a
                                                                                                                                                      Screening for anti-neoplastic agent involves exposing cells to chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature ger

gravin polypeptide coding sequence.

(first entry)

13-JUL-1998

Human

```
This sequence encodes the human gravin polypeptide, which represents a polypeptide of the invention. The polypeptides are fragments capable of binding to type II regulatory subunit of cAMP-dependent protein kinase (PKA). Gravin is a kinase anchoring protein that binds to type II regulatory subunits of PKA and protein kinase C (PKC). Gravin is also an antigen of the autoimmune disease Myasthenia gravis (MG), where a patient develops antibodies against their own nicotinic acetylcholine receptors. The polypeptides are useful for providing analogues of gravin in the study of the modulation (e.g. blocking, inhibiting and stimulating) of interactions between gravin and kinase. The peptides are involved in the modulation of gravin-kinase interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    311
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        371

The present sequence is the coding sequence for human gravin. Gravin is an A-kinase anchoring protein (AKAP) which is involved in the localisation of cAMP dependent protein kinase A (PKA) via interactions between the RII binding region and the PKA regulatory subunit RII. Gravin is also an antigen found in myasthenia gravis sufferers, and it is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           4959

This sequence was isolated by first screening a human umbilical vein endothelial cell cDNI library with serum from a myasthenia gravis patient, and then searching human heart cDNA library for sequences resembling the isolated sequence. This was done because the first sequence obtained was shown to be shorte than the full length coding sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 6605

```
polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques or restore normal activity of (II) or to treat disease states involving (II). (III) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in the produce other types of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and diagnostic coding sequences of the invention.

Coding sequences AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

18 olated nucleic acid detection reagent for detecting 1000 or more from Drosophila and for elucidating cell signalling and cell-cell The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and 1558 5024 4620 CAGGGCCCGACTGTCAGGCAAAATCGACACCAGTGATAGTATCTGCTACTACCAAGAAAG 4679 4680 GCTTAAGTTCCGACCTGGAAGGAGAAACCACATCACTGAAGTGGAAGTCAGATGAAG 4739 1469 luAspLysProAspAlaGlyProAspAlaAspGlyLysGluSerThrAlaIleGluLysV 1489 albeuLysAlaGluProGluIlebeuGlubeuGluSerLysSerAsn-LysIleValbeu 1508 4794 ATTTAGAGCCTGAAAATGGGATTTTGGAACTTGAGACCAAAAGCAGTAAAACTTGTCCAA 4853 AsnValIleGlnThrAlaValAspGln-PheAlaArgThr---GluThrAlaProGluTh 1527 1527 rHisAlaTyrAspSerGlnThrGlnValProAlaCysArgLeuAspSerArgGluProAs 1547 4914 GTTGACGTCTGAGTTACAGACACAA-----GCTTCACGTGATAAAAGCTGACAGCCAGG 4967 |||||||| ::: ||||||::: GAAACACCAATTACTTCAGCCAAGAGGAGTCAGGTCAACTCACCAGTGGGACAAGCACAT 5084 tLysHisProValProGlnProArgGlu--------AspLeuGlnVa 1571 hrleuHisProAspleuGlnGlyGluIleSerAlaSerGlnArgGluArgSerGluGluG 4740 TCGATGACCAGGTTGCTTGCCAGGAGGTC----AAAGTGAGTGAGTAGCAATTGAGGAGG 4968 ACGC---TGGGACAGGAACGGAGAAGAAGAAGGAGGACCCTCAGGCCTCTGCACAGGAT Drosophila, developmental biology, cell signalling, insecticide, pharmaceutical, gene, ds.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                        isolated nucleic acid detection reagent for detecting 1000 or more as from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ||| ::::::|||

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 18506 BP; 5394 A; 4676 C; 4890 G; 3546 T; 0 other;

                                                                                                                         The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9075
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9456

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         11785 GGTAAGAAAAAGCCAAAGGAGGAAGAAGCGCCCGAAAATGTTACTCTTAAAAAACATTCCG 11726
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG175) and the encoded proteins (ABBS7037-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         No : :

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABBD1872072).

polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques or restore normal activity of (II) or to treat disease states involving (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in disposfics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic coding sequences of the invention.

Coding sequences ABS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this parent did not appear in the printed specification, but was obtained in electronic format directly from MIPO

                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1, Application US/08635121
Patent No. 5910442
GENERAL INFORMATION:
APPLICANT: Gelman, Irwin H.
TITLE OF INVENTION: TUMOR SUPPRESSOR GENE
NUMBER OF SEQUENCES: 2
CORRESPONDENCE ADDRESS:
ADDRESSEE: Brumbaugh, Graves, Donohue & Raymond
STREET: 30 Rockefeller Plaza

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
